

SEP sesam open-Xchange®

Data security and data availability in heterogeneous networks. Flexible. Scalable. Economic.

SEP now offers a cost-effective method to back up and restore the Open-Xchange® Server. SEP sesam delivers unparalleled back up security in your Open-Xchange® environment.

Data Security Open-Xchange® Server

Because of its overwhelming price/performance advantage more professional users are choosing the Open-Xchange for their daily work activities. The Open-Xchange® GUI assures an intuitive interface providing almost all functions of MS Outlook Exchange Server.

SEP sesam Single Mail Restore used with the online tools provided by Open-Xchange®, support the restore of data down to a single mail file. SEP sesam makes access to secured user data fast and easy. Moving to Open-Xchange® has never been easier or more economical than it is today!

Product Features

Disaster Recovery – Layered data recovery is possible from tape to CD-Recover.

Centralized administration - SEP sesam master GUI (JAVA Interface) makes the complete administration either from a central or a remote location fast and easy.

Performance – up to 64 output data streams are possible.

Encryption - For additional safety and security SEP sesam encrypts data at the client and transfers the encrypted data to the server.

Firewall – More important today than ever before. SEP sesam can back up clients over multiple firewalls. Back up Server utilizes three defined and clearly assigned ports to transfer data securely between the client and the server.

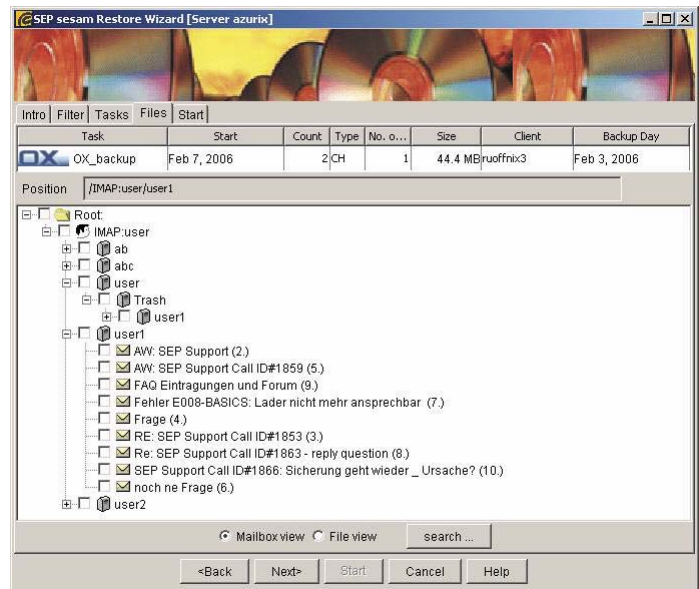

SAN – Supports LAN-free Back up in SAN world's leading Linux software. Further, with support for both Windows and Unix platforms, SEP sesam offers a comprehensive solution for heterogeneous system topologies.

SEP scheduler—is an integrated, extremely flexible, time driven scheduler to control all tasks including back up and restore. Also includes a calendar for easy viewing of the scheduled tasks.

Many customers today demand platform independent solutions based on open standards that do not require a huge investment in time and money. The Linux Initiative was established to deliver high performance computing to the Linux world. SEP's Global Storage Management products fully support this initiative.

Nearly all operating systems and databases can be backed up and secured by SEP sesam and sesam provides quick restore of company critical data insuring constant online availability. The SEP Firewall offering enables corporations to back up critical data through firewalls (one or many) more simply and straightforward than ever before possible. All your data, all your time.

Our strategic partnership with Novell/SUSE and RedHat provides our customers trouble-free integration of SEP sesam on all versions of the world's leading Linux software. Further, with support for both Windows and Unix platforms, SEP sesam offers a comprehensive solution for heterogeneous system topologies.
