Backup and Recovery for Azure AD

Data from Azure AD also gets lost

What would happen if your Azure AD was compromised in a ransomware attack? Unfortunately, most businesses learn the hard way that not having a backup of Azure AD introduces risk. Without the ability to recover immediately, a compromised Azure AD causes serious damage.

Always instant access to your Azure Active Directory infrastructure and metadata? With the best coverage on the market from SEP this is possible.

Your cloud data is safe from malicious ransomware attacks or accidental deletion with our blockchain-based encryption technology.

With four backup copies stored in two separate, vendor-neutral locations, your data is always available.

SEP CAPS is the easiest and most cost-effective way to protect your Azure AD with archiving, superior usability and unlimited storage, as well as fast recovery capabilities and minimize downtime.

Coverage for Your Data

SEP Backup and Recovery for Azure Active Directory is a simple, yet powerful application to protect your Azure Active Directory infrastructure from accidental deletions and ransomware. The coverage

Why Companies Globally Trust Us

Customers around the world have made SEP their preferred choice to protect their data against data loss and downtime. Here's why they trust SEP CAPS to keep their Azure AD data safe:

Data Availability

Exclusively dedicated to securing SaaS data, SEP CAPS proprietary cloud is designed to ensure data availability — always.

Instant Recovery

Restore your data in seconds with our unique search and restore features, based on ultra-fast indexing and reindexing algorithms.

Cost Effective

With SEP CAPS, everything is included in the seat price, keeping things simple. Scale your data protection at no extra cost.

Always Secure

Described by analysts as industry-leading, our platform is purpose-built from the ground up for ultimate security.

Simplicity First

A universal service that covers all your SaaS data protection needs. Loved by admins for its ease of use. Simplicity that will save you time.

SEP CAPS is the world's only independent cloud dedicated to SaaS data protection

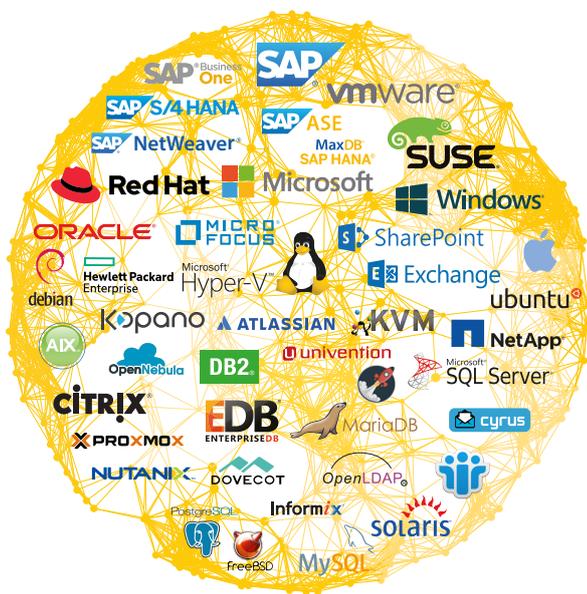

You only need SEP CAPS to cover all your key SaaS applications, including Microsoft 365, Salesforce, Azure Active Directory, Dynamics 365 and Google Workspace. SEP CAPS is trusted by a lots of companies worldwide to protect and manage their cloud data. Leading analysts agree SEP CAPS is the fastest and most secure enterprise-class SaaS back-up and recovery service.

Get Your Azure Active Directory Infrastructure Back in Seconds

The M365 Recycle Bin was never intended to be an enterprise-level recovery solution. Avoid disruption due to lost or inaccessible data with SEP CAPS instant and easy restore features:

Our granular restore capabilities include:

- ✓ In-Place Restore
- ✓ Restore In Bulk
- ✓ Restore Subobjects
- ✓ Download
- ✓ Sharable Links

The Company - more than 30 Years of Data Protection & Recovery Experience

SEP makes the world a little safer every day. With the hybrid backup and disaster recovery solutions, the data of companies and organizations are backed up around the clock and completely restored in the event of a disaster.

Our ambition: No data should be lost. This is why all components are extensively tested and constantly improved after development.

SEP has been developing and selling enterprise-wide data protection solutions since 1992, based in Holzkirchen near Munich. SEP has a strong partner network and relies 100% on resellers for sales.

GDPR ready - compliant data protection and recovery

SEP sesam secures absolutely reliable business critical information, applications, databases and systems, which contain all kinds of information from sales and customer relations, production and administration up to financial and business transactions. Because of this importance, a comprehensive business continuity strategy is needed that focuses on Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs), which are essential in a disaster recovery scenario.

SEP sesam is optimized for securing virtualized and physical environments and enables compliance of legal requirements in heterogeneous IT environments. Encryption is one of the central technical elements.

Secure data retention is introduced by the encryption of the SEP Si3-DedupStore. After splitting the data stream into blocks and compressing each block, each individual block can now be encrypted with an arbitrarily definable key.

To restore the data, the key can be stored in the database of the backup server or the data owner must authorize a restore with his personal key. This encryption guarantees BSI conformity.
