

Protect SAP/SAP HANA data with Red Hat and SEP

“We operate and host SAP systems for our customers. For data backup we use SEP sesam with an MSP license. This is the ideal and very attractively priced solution for our infrastructure, which also is based on Red Hat Virtualization.”

Alex Borchmann
 Head of SAP managed services
 Collogia IT services GmbH

Introduction

The ability to perform a comprehensive backup and restore of an SAP environment is critical to many businesses that rely on SAP solutions to manage their customer relationships and business operations. Data protection and security laws, e.g., the EU General Data Protection Regulation (GDPR) and the EU NIX Directive and IT Security Act, amplify the importance. But ensuring the protection of the complete environment can be challenging, especially for those offering SAP solutions as-a-Service who need to meet service level agreements based on recovery point objectives (RPOs) and recovery time objectives (RTOs).

SEP sesam safeguards SAP/SAP HANA data in Red Hat® environments, making sure it is continuously protected and available. Red Hat solutions and SEP sesam complement each other, offering high availability and scalability on physical and virtual environments with disaster recovery and backup for the complete IT environment. The combination of Red Hat Enterprise Linux® for SAP solutions and SEP sesam is a low cost-of-acquisition data protection solution with minimal ongoing maintenance costs to reduce the total cost of ownership (TCO). SEP sesam has been certified by SAP for more than 15 years, including SAP HANA running on Red Hat virtualized environments.

Protecting the complete SAP/SAP HANA environment

Universal support for complex system environments strongly distinguishes SEP sesam in the data protection market. The solution provides enterprise-grade backup for a broad range of heterogeneous, hybrid cloud, and virtualized environments. It’s easy to set up and use, and works independent of storage or operating systems.

The SEP sesam agent runs on a host which connects to a central backup server via the Red Hat Virtualization API (application programming interface). Using the live snapshot capabilities built into Red Hat Virtualization, consistent backups of virtual machines – even during production – means there’s no downtime. The robust and reliable combination of SEP sesam with Red Hat solutions automatically protects the complete SAP/SAP HANA environment with high availability and disaster recovery capabilities to maintain IT resiliency. SEP sesam supports backup of any SAP environment including SAP HANA as well as classical databases, such as Oracle, SAP ASE, MaxDB, DB/2 (AnyDB) with no additional investment required as one migrates to SAP HANA. Consolidating multiple backup systems in a centrally administrable solution keeps business-critical data available – saving time, capital, and operating costs.

SEP sesam integration with Red Hat

SEP sesam integrates with Red Hat automation tools such as Red Hat Ansible® Tower, as well as Red Hat CloudForms®, which permit provisioning and management across virtual machines and private clouds. It also works with Red Hat Satellite, the infrastructure management solution for Red Hat Enterprise Linux, supporting everything from physical machines to hybrid multicloud environments. Integration throughout the Red Hat software stack results in increased performance, security, and value when other products are added, like Red Hat OpenShift® Container Platform.

SEP and Red Hat strategic alignment

SEP has been a Red Hat ISV Advanced Partner for 15 years and SEP sesam was the first certified recovery solution for Red Hat Virtualization. Like that of Red Hat, SEP software is also open source-based and completely SAP-certified. SEP, as an Advanced Business Partner, offers Red Hat certified expertise and a track record of completing successful Red Hat projects.

About SEP

SEP is the developer of backup and disaster recovery solutions for the protection of cross-platform, heterogeneous IT environments. SEP has been developing and marketing enterprise data protection solutions since 1992.

SEP has a strong partner network and relies entirely on resellers for its sales. Customers in more than 50 countries include top-tier universities and market leaders in healthcare and the financial sector.

Conclusion

SEP sesam data protection for SAP/SAP HANA provides the following benefits:

- **Comprehensive protection.** SEP sesam protects the whole IT environment, not just the SAP application – to provide the business continuity enterprises and service providers count on.
- **Quality engineering.** More than 25 years of German engineering experience and a deep understanding of GDPR requirements have gone into the development of SEP sesam, which keeps users compliant.
- **Open source mentality.** With a similar development and delivery model, SEP sesam offers a flexible licensing model to align with Red Hat products, reducing complexity.
